The goal is set on the basis of the educational and professional training program for a doctor in the specialty in accordance with the block of its content module and is the basis for building the content of the discipline. The goals (final and specific) are formulated in terms of "professional activity" taking into account the relevant taxonomic levels.

The ultimate goals of the discipline:

Ability to think abstractly, analyze and synthesize information when working with common infectious diseases

Knowledge and understanding of the subject area and subject activities when working with infectious patients and during anti-epidemic measures.

Ability to identify the main clinical symptoms that form a characteristic syndrome for the most common infectious diseases.

Ability to interpret the patterns and features of the pathological and epidemiological process in various infectious diseases

Ability to make a preliminary clinical diagnosis, plan preventive and quarantine measures for the most common and especially dangerous diseases

Ability to carry out clinical and laboratory differential diagnosis of various infectious diseases and infectious diseases with non-infectious diseases
